Dipendra Sharma

Forward Deployed Engineer Intern | Customer Problems → AI Solutions

+91 9780111228 | hello@dipsharma.me | github.com/tech-dipesh | linkedin.com/in/tech-dipesh

Summary

Aspiring **Forward Deployed Engineer** with strong backend foundations and a deep instinct for understanding customer problems before building. I believe real solutions come from sitting with the user, observing where their workflow breaks, and fixing the actual root cause. Built an **AI resume analyzer** by working directly with recruiters to understand their screening pain points; iterated on prompt design based on their feedback. Built a **fraud detection system** using pattern recognition at a 24-hour hackathon. Currently building **Daigo**, a two-sided real-time marketplace, solving cold-start, geospatial matching, and pricing correctness for real users. I am a **high-ownership generalist** comfortable jumping from customer conversation to debugging logs to shipping a fix. **Strong spoken English** for client calls. Learning deeply about **AI agents, LLMs, RAG, and agentic workflows**.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL
AI & Agents: AI/ML Integrations, OpenAI API, Claude, Prompt Engineering, RAG, LLM Integration
Backend: Node.js, Express.js, REST APIs, JWT, RBAC, Zod, Jest, Supertest
Databases: PostgreSQL, MongoDB, Supabase, Prisma
DevOps & Tools: Docker, Git, GitHub Actions, AWS (EC2, S3, IAM), Nginx, Linux Server Administration, SSH
Customer-Facing: Requirements Gathering, Client Communication, Solution Design, Business Problem Framing

Projects

Daigo | GitHub **Aug 2026 – Present**

- Building a two-sided marketplace with role-based auth across 5 tiers and vehicle verification, solving **cold-start bootstrapping** with circle matching (college/office domains) and notify-me waitlist.
- Implementing **geospatial route matching** via raw **PostGIS queries** through Prisma `$queryRaw`, detour limits, meeting points, and **multi-hop relay matching** (chaining two drivers) as fallback.
- Building **real-time accept flow** with **WebSocket + Redis pub/sub** for cross-instance delivery, first-accept-wins concurrency using **Prisma transactions**, and idempotency keys for payment retries.
- Designed a **pricing engine** with per-zone multipliers, time-of-day bands, and demand multipliers. Two hard caps checked against the rounded value (not raw float), eliminating a class of pricing bugs most systems miss.
- ***Tech: Next.js, TypeScript, Prisma, PostgreSQL + PostGIS, Redis, QStash, Stadia Maps, Razorpay***

Yeti Jobs | GitHub | Live **Jan 2026 – Apr 2026**

- Identified a **customer problem**: recruiters spend hours manually screening resumes. Worked directly with real world problem statement to understand legacy workflow. Built a solution integrating the **OpenAI/Grok API**; users upload a PDF, the system extracts text, scores it (0 to 100), and returns actionable ATS feedback.
- Iterated on prompt design based on recruiter feedback, improving accuracy of feedback and reducing false positives. Delivered a solution that saves hours per week for its users.
- Integrated into a full-stack job portal with **50+ APIs**, **JWT + RBAC**, and **10 PostgreSQL tables**. Optimized queries (**30% faster**) and containerized with Docker (**74% image reduction**).
- Deployed the backend to **AWS EC2**, configuring **Nginx as a reverse proxy** and systemd for process management. Load-tested to **67 req/sec** with **0 failures**, maintaining **99.5% uptime** over 3 months.
- ***Tech: OpenAI/Grok, pdf-parse, Node.js, Express, PostgreSQL, React, Docker, JWT***

Achievements

- Built an **AI-powered fraud detection system** at a hackathon, using pattern recognition to connect similar cases and identify fraudulent activities (team lead, 24-hour deadline).
- Selected for **GirlScript Summer of Code** 2026, open-source contributor working on real-world projects.
- Winner of **CodeaThon 7.0** (cash prize, 120+ participants), demonstrated ability to solve unfamiliar problems under tight deadlines.
- **313 LeetCode** problems solved | **20+ GitHub repos** | **1000+ commits**.
- Shortlisted for **Round 2 – Polaris Fellowship 2026**, selected from thousands across 300+ cities for builders and problem-solvers.
- **CEED Member** (Entrepreneurship Program), focused on product thinking and business problem-solving.

Certifications

- **AWS Educate Introduction to Cloud 101**: EC2, S3, IAM fundamentals
- **Claude 101**: Prompt Engineering, Artifacts, Claude Skills

Education

Chitkara University **Aug 2024 – Expected 2027**

Bachelor of Computer Applications (BCA) | CGPA: 9.38/10 *Himachal Pradesh, India*

- Coursework: DSA, Operating Systems, DBMS, Software Engineering, Computer Networking
