Summary

I'm a Developer love to build a infrastructure that a a error prone, and Run Automation, with fallback with the Help of: Devops/Cloud. I've a Strong foundation in **Operating Systems, Computer Networking, Data Structures & Algorithms**, and **Linux** — understands how processes, memory, filesystems, and network protocols behave under load. With experience on working with **Docker multi-stage builds** and **AWS (EC2, S3, Lambda, IAM)** — deployed real applications, hosted static sites, and configured IAM access. Over the past few years i've been fixing problems using a first-principles approach, tracing root causes through container logs, system calls, and network activity. I take ownership of problems end-to-end having led multiple hackathon teams and implemented **rate-limiting** safeguards proactively. with Comfortable working under ambiguity and shipping fixes that **mitigate risk** before it reaches users.

Technical Skills

Containerisation: Docker, Alpine Linux, Multi-stage builds
Cloud & AWS: AWS (EC2, S3, Lambda, IAM), Vercel, Render, Supabase (S3-compatible)
CI/CD & Automation: GitHub Actions, Cron jobs, Bash scripting, Linux server administration
Observability & Testing: Redis, Apache Bench, Logging, Jest
Backend & Databases: Node.js, Express, PostgreSQL, MongoDB, Prisma
Languages & Tools: JavaScript, TypeScript, C++, SQL, Git, Linux, Neovim
Foundational: Kubernetes concepts (Pods, Deployments, Services)

Projects

Yeti Jobs | [GitHub](#) | [Live](#) Jan 2026 – Apr 2026

- Containerised full-stack app with **Docker multi-stage builds** (Alpine) — backend **1.99GB** → **520MB (74%)**, frontend **1.03GB** → **220MB (79%)**. Eliminated cold starts via cron job (**50s** → **<2s**), sustaining **99.5% uptime** over 3 months on free-tier Render.
- Load-tested with **Apache Bench: 1,000 requests** at **100 concurrent users** → **67 req/sec**, p95 **1,929ms**, **0 failures**. Optimised PostgreSQL with composite indexing (**7ms** → **5ms**, ~30%) and connection pooling for **20 concurrent connections**.
- Debugged **10+ production issues** — PostgreSQL pool leaks, duplicate cron executions, container memory spikes. Built shell monitoring scripts to detect failures before they cascade.
- Deployed via **GitHub Actions** CI/CD to **Vercel** (frontend) and **Render** (backend). Integrated **Supabase** (S3-compatible storage) and implemented Express rate limiting to mitigate resource abuse.
- *Tech: Docker, GitHub Actions, PostgreSQL, Node.js, Express, Render, Vercel, Apache Bench, Supabase*

RuntimeX | [GitHub](#) May 2026 – Present

- Building an observability pipeline for event ingestion and async processing using Express, TypeScript, Prisma, and **BullMQ with Redis**. Designed for containerised deployment with Docker and S3-backed log archiving.
- *Tech: Node.js, TypeScript, Express, PostgreSQL, Redis, BullMQ, Prisma, Docker*

Achievements

- Selected for **GirlScript Summer of Code 2026** — national open-source programme.
- **313 LeetCode** problems solved | **20+ GitHub repos** | **1000+ commits** (last 12 months).
- Winner of **CodeaThon 7.0** (university hackathon, cash prize, 120+ participants).
- Shortlisted for **Polarish Startup Incubator** Program.

Certifications

- **AWS Educate Introduction to Cloud 101** — Provider: AWS • Server • EC2 • Lambda • S3 • IAM
- **Web Development Masterclass** – Provider: Udemy • HTML/CSS • JavaScript • Node.js • REST APIs

Education

Chitkara University Aug 2024 – Expected 2027

Bachelor of Computer Applications (BCA) | CGPA: 9.44/10 Himachal Pradesh, India

- Coursework: DSA, Operating Systems, Computer Networking, DBMS, Software Engineering, Web Performance
