## Forward Deployed Engineer Intern | Solving Business Problems with AI

☎ +91 9780111228 | ✉ [dipsharmadev@gmail.com](mailto:dipsharmadev@gmail.com) | 🌐 [github.com/tech-dipesh](https://github.com/tech-dipesh) | 🔗 [linkedin.com/in/tech-dipesh](https://linkedin.com/in/tech-dipesh)

### Summary

Aspiring **Forward Deployed Engineer** with a strong foundation in backend systems and a deep curiosity for understanding customer problems. I believe the best solutions come from sitting with the user, understanding their workflow, and building what they actually need — not what we assume. Built AI-powered solutions for real-world problems: automated resume screening for recruiters, job application tracking for seekers. Built a **fraud detection system** using pattern recognition in a 24-hour hackathon. Currently building **RuntimeX**, an observability pipeline — because understanding system behavior is critical for reliable solutions. Skilled in moving from customer conversations to prototypes to production. Learning deeply about **LLMs**, **RAG systems**, **AI agents**, **automation workflows**, and **enterprise integrations**. Strong engineering foundation — **50+ APIs**, **PostgreSQL optimization**, **Docker**, and **99.5% uptime**.

### Technical Skills

**Languages:** JavaScript, TypeScript, SQL

**AI & Automation:** OpenAI API, Grok, Prompt Engineering, RAG, LLMs, n8n (familiar), LangChain (exploring)

**Backend:** Node.js, Express.js, REST APIs, JWT, RBAC, Zod, Jest, Supertest

**Databases:** PostgreSQL, MongoDB, Supabase, Prisma

**DevOps & Tools:** Docker, Git, GitHub Actions, Vercel, Render, AWS (EC2, S3, IAM), Linux

**Problem Solving & Customer Engagement:** Requirements Gathering, Solution Design, Customer Conversations, Business Problem Framing

### Projects

#### Yeti Jobs — AI Resume Analyzer & Application Tracking | [GitHub](#) | [Live](#) Jan 2026 – Apr 2026

- Identified a **customer problem**: recruiters spend hours manually screening resumes. Built an AI-powered solution using OpenAI/Grok — users upload a PDF resume, the system extracts text, scores it (0–100), and delivers actionable ATS feedback.
- Worked directly with potential users to understand their screening workflow, iterated on prompt design based on their feedback, and delivered a solution that saves time and improves hiring decisions.
- Integrated the solution into a full-stack job portal with **50+ APIs**, **JWT + RBAC**, and **10 PostgreSQL tables**. Optimized database queries (**30% faster**) and containerized with Docker (**74% image reduction**).
- Load-tested backend to **67 req/sec** with **0 failures**; maintained **99.5% uptime** over 3 months via cron-based automation — ensuring the solution is reliable for real users.
- Tech:** *OpenAI/Grok, pdf-parse, Node.js, Express, PostgreSQL, React, Docker, JWT*

#### RuntimeX — Observability Pipeline (In Progress) | [GitHub](#) May 2026 – Present

- Building an **event ingestion pipeline** that helps teams understand system behavior — because reliable solutions require visibility into what's actually happening.
- API receives telemetry events, pushes to Redis queue, and a background worker processes them in batches using **createMany** for efficient storage. Implements producer-consumer patterns, failure recovery, and logging.
- Currently implementing lazy session materialization — grouping raw events into sessions for dashboard views. Designed for scalability and observability.
- Tech:** *Node.js, TypeScript, Redis, PostgreSQL, Prisma, BullMQ (planned)*

### Problem-Solving & Customer Engagement

- Built an **AI-powered fraud detection system** at a university hackathon — used pattern recognition to connect similar cases and identify fraudulent activities (team lead, 24-hour deadline, user-centered approach).
- Selected for **GirlScript Summer of Code 2026** — open-source contributor working on real-world projects.
- Winner of **CodeaThon 7.0** (cash prize, 120+ participants) — demonstrated ability to build working solutions under tight deadlines.
- 313 LeetCode** problems solved | **20+ GitHub repos** | **1000+ commits**.
- Shortlisted for **Round 2 – Polaris Fellowship 2026** — selected from thousands across 300+ cities for builders and problem-solvers.
- CEED Member** (Entrepreneurship Program), Chitkara University — focused on product thinking and business problem-solving.

### Certifications

- AWS Educate Introduction to Cloud 101** – EC2, S3, IAM fundamentals

### Education

#### Chitkara University

Bachelor of Computer Applications (BCA) | CGPA: 9.44/10

- Coursework: DSA, Operating Systems, DBMS, Software Engineering, Computer Networking

Aug 2024 – Expected 2027

Himachal Pradesh, India
